Meningeal (Brain). B) Plasticisers. D). Most of the examples, A-D, would become plasticised under a variety of conditions. Exercise: Are there any other classes that you can think of? What are they? Common Problems: * Inflammation * Necrosis * Hemorrhage # CHAPTER 5 # ADDERALL TREATMENT ADDERALL is a stimulant that was marketed to young people. It is now also being used to treat ADHD in older people. ADHD is more common in older children and teenagers than in younger children. It can make the child more hyperactive, and cause them to be more impulsive, and also to be more focused on the present. When older people are taking Adderall, the increased focus on the present means that they are more likely to take risks, than if they were not on it. When Adderall is used for ADHD, the person usually needs a higher dose to achieve the same effect. The rate of adverse effects is the same for both younger and older people. Sometimes side effects can be seen after the drug has been taken for a long time. TREATMENT Since the Adderall market changed so drastically, many pharmacies and Internet sites started to sell cheap counterfeit Adderall without prescription. Always try to buy your Adderall from a reliable source. If your ADHD medication is stolen or misused, it can cause a variety of side effects. Antidepressants A combination of a small dose of an SSRI and a high dose of a fast acting dopamine agonist. Antihypertensives A combination of a low dose of an SSRI and a small dose of a fast acting alpha adrenoceptor antagonist. ADDERALL ADVERSE EFFECTS Although side effects are usually very mild, there can be some serious side effects. These include: * Allergic reaction (sweating, urticaria, rhinitis, angioedema). * Confusion. * Tremors. * Leg cramps. * Dizziness, lightheadedness, nausea. * Irregular heartbeat. * Headaches, insomnia. * Dizziness. * A dry mouth. * 82157476af
